

# Aliaxin® EgoLips

## LIPS, AN EXPRESSION OF UNIQUENESS.

Expressing yourself has always been associated with the eyes, like a mirror to the soul, but the lips also play a vital role in this. They are like our personal translator, turning the intensity of our emotions into expressions that are unique to each of us.

The increase in demand for lip treatments coincides with the opportunity and need to enhance their uniqueness, by restoring their natural volume and ensuring adequate tissue integration.

This was the reason behind **IBSA Derma Aliaxin® Egolips**.

Three clinical protocols designed to enhance the harmony and distinctive characteristics of the lips.

## WHY ALIAXIN® EGOLIPS?

The high elasticity and low viscosity of ALIAXIN® gels mean they are absorbed more effectively, reducing any trauma or alteration of the structural tissue.
